

Whether your business is a restaurant or retail establishment, your POS system is the lifeline of your operations. Restaurants use a POS system to collect hours, employee tips, gross receipts and in some cases, employee master file information. Let your clients easily and securely move their data from their POS to ADP payroll systems with a POS connector solution. Typically, these programs are setup, tested, and then installed at a central payroll location where all the POS files are sent. This enables the payroll practitioner to

easily upload information into ADP for processing. Using the data collected from the POS system, ADP can better process the FICA Tip Credit Report, saving companies thousands of dollars per year. HR Knowledge has helped hundreds of companies, and we have a specific POS Feed built for Dunkin' Donuts and McDonald's. Regardless of the POS system, count on the team at ResNav to connect your POS to payroll. Our solutions have a simple pay-as-you-go pricing and modest one-time implementation fee.
