

Many construction companies, engineering firms and Architects rely on a Job Costing system, but struggle with Payroll Taxes, Wage Garnishments, W2's and the money movement to pay employees. The ResNav Timberline (Sage 300) Connector allows these firms to continue to use their Job Cost system, but achieve the benefits of ADP's Workforce Now Payroll Solution. Hundreds of clients currently run a fully functional bridge that allows the client to process payroll as they do today in Timberline "Gross to net". The Timberline (Sage 300) Connector is built in Microsoft Access, and installed through GotoAssist.com.

Our clients run the Timberline to ADP converter, which will take coded hours, coded earnings, deductions, and employee taxes, and move them into a directory to import into ADP. Our clients Log into Workforce Now to verify data and transmit to their ADP service center. ADP is responsible for all of the tax filing, wage garnishments, direct deposits and W2's while the client maintains their Job Cost data necessary to run their businesses. Employees have access to a self-service portal and can enjoy the free ADP Mobile App to access their own information like pay statements or PTO balances.

Software Features
